**OBJECTIVES OF THE GROUP**

- a) To promote interest in and preserve Western Australian indigenous orchids.
- b) To learn the best means of cultivation and do all things possible for the conservation of native orchids in their environment.
- c) To learn their habits and keep records.
- d) To have field days and learn to recognize the different genera and species.

- e) To hold meetings for the exchange of knowledge and furthering of interest in W.A. orchids.
- f) To affiliate with kindred organizations.
- g) To make rules for the governing of the Group's domestic affairs.
- h) To do all such lawful things as are incidental to or conducive to the attainment of the above objectives.

*Note: The opinions expressed by contributors to this Bulletin are not specifically endorsed by this Group.*

**NEXT COMMITTEE MEETING**

Wednesday 14th September at 7.30 pm

**NEXT GENERAL MEETING**

Wednesday 21<sup>st</sup> September at **7.30** pm  
at the Lecture Theatre, Kings Park Admin. Office.

**ORCHIDS**  
OF SOUTH-WEST AUSTRALIA

THIRD EDITION

**BULLETIN ARTICLES**

Please email any Bulletin contributions to Urszula Kokosinska at [redacted] or call on [redacted]. Articles for the next Bulletin need to be submitted by 1<sup>st</sup> of next month.

**GENERAL MEETINGS 2011 – 21<sup>st</sup> September, 19<sup>th</sup> October, 16<sup>th</sup> November.**

Long awaited **3<sup>rd</sup> Edition** of  
**“Orchids of South-West Australia”** by  
**Noel Hoffman & Andrew Brown** is here!

The book will be available to  
WANOSCG members at the **October 19<sup>th</sup>**  
meeting for **\$50** (RRP is \$59.95).  
There will be no eftpos facilities so cash and cheques  
would be perfect.

## WANOSCG GENERAL MEETING MINUTES Wednesday 17 August 2011

Meeting held at: BGPA Boardroom, Kings Park.

Meeting opened: 7:37 pm

### CIRCULATION OF REPORTS:

Attendance Book, Correspondence List and Treasurers Report were circulated.

### ATTENDANCE:

Attendants: 35 members and 1 visitor: Neville Risbey.

Apologies: Christine Thomas, Christine Lock, Matz Dahlkamp, Ross and Margaret Fox, Kim and Thea Hanson.

### RAFFLE:

Kindly donated by: Tom Burbidge.

#### 1. PREVIOUS GENERAL MEETING MINUTES:

The Minutes of the General Meeting of 15 July 2011 as distributed are a true and correct record of the meeting.

Moved: Bill Burton                      Seconded: Donna Wajon                      Carried.

#### 2. BUSINESS ARISING FROM THE PREVIOUS MINUTES:

A Minutes Secretary is still required.

#### 3. CORRESPONDENCE:

Not listed.

#### 4. MATTERS ARISING FROM CORRESPONDENCE:

Nil.

#### 5. TREASURER'S REPORT:

John Ewing read the Treasurer's Report.

Income: \$507 mostly from membership fees. Expenditure: \$144 mainly for badges and printing. Balance: \$64,606.56.

We are still awaiting information from the Insurance Company and their invoice.

Moved: Gary McDonald                      Seconded: John Ewing                      Carried

#### 6. FIELD TRIPS:

##### 6.1 Sightings/Observations:

- Paganoni Rd, Rockingham: *Drakaea elastica* leaves (Glossy-leafed Hammer Orchid).
- Port Gregory Rd, Northampton: *Caladenia elegans* (Elegant Spider Orchid). The area where *Caladenia hoffmanii* (Hoffman's Spider Orchid)

grows has been washed away by rain. A lot of verges have been washed out by rain.

- Kalbarri NP: *Caladenia reptans impensa* (Pale Pink Fairy), *Paracaleana terminalis* (Smooth-billed Duck Orchid).
  - Eneabba: *Caladenia footeana* (Crimson Spider Orchid), *Pheladenia deformis* (Blue Beard) and a hybrid between them, *Ericksonella saccharata* (Sugar Orchid).
  - Don & Eva Smith's Property, Toodyay: *Caladenia arrecta* (Reaching Spider Orchid), *C. reptans* (Little Pink Fairy), *Pterostylis recurva* (Jug Orchid).
  - Donna & Eddy Wajon's Property, Tenterden: *Caladenia reptans* (Little Pink Fairy), *Cyrtostylis robusta* (Mosquito Orchid), *Diuris corymbosa* (Common Donkey Orchid), *Pterostylis recurva* (Jug Orchid), *Pt. sanguinea* (Dark Banded Greenhood)
  - Stirling Ranges NP: *Thelymitra variegata* (Queen of Sheba).
  - Sabina Rd, Busselton: *Caladenia magniclavata* (Big Clubbed Spider Orchid), *C. reptans* (Little Pink Fairy), *Pterostylis recurva* (Jug Orchid), *Pt. vittata* (Banded Greenhood), *Pt. sp. Slender* (Slender Snail Orchid).
  - Pomeroy Rd, Lesmurdie: *Caladenia arrecta* hybrid, *C. longiclavata* (Clubbed Spider Orchid), *Pterostylis barbata* (Bird Orchid), *Pt. recurva* (Jug Orchid).
  - Mills Park Lookout, Chapman Valley: *Caladenia hoffmanii* (Hoffman's Spider Orchid.)
  - York Field Trip Report to come.
- 6.2 Trips: Proposed trips are in the bulletin.
- Ninghan Station Trip currently postponed as station roads are closed due to rain.
  - Kim & Thea's local orchid hot spot (along Tonkin H'way): 2 Guilfoyle Green CLOVERDALE 17 September 2011 at 1 – 4 pm.

#### 7. GROWERS TABLE: Nil

#### 8. CONSERVATION:

- 8.1 Emu Point development approved by EPA. 14.7 ha to be cleared with 16.3 ha to be retained.

- 8.2 Comments on Roe 8 PER is due by 5 September 2011. There is a rally on Saturday 20 August 2011 at Bibra Lake between 11:00 am and 1:00 pm. Russel Thomas reported that *Ericksonella saccharata* (Sugar Orchid) was observed in the road alignment 2 years ago and is the most westerly population known.
- 8.3 Iain MacLean reported that the *Thelymitra pulcherrima* population along Erindoon Rd, near Indoon, Eneabba, was eradicated by a grader extending the road by 2 metres or more. The road was wide enough already and did not appear to need clearing.
- 8.4 Eddy Wajon asked everyone to look out for evidence of roadside clearing and advise the Conservation Officer so that relevant shires can be contacted to seek further information.
- 8.5 Road verge clearing is occurring throughout WA. Eddy Wajon asked everyone to look in the West Australian on Mondays to identify proposed clearing and whether they or someone else should make a submission.
- 8.6 WANOSCG should send a list of orchids found along roadside verges to Shires to alert them to the presence of orchids before any clearing occurs.
- 8.7 Ryan Phillips suggested we advise DEC of the location of significant orchid sites so that markers can be put up alerting road workers of their presence.
- 8.8 Eddy Wajon gave background on the Roadside Conservation Committee and his membership representing the Wildflower Society of WA. He said the executive officer spent a lot of time delivering training courses to Shire councillors and staff regarding the value of roadsides and strategies to minimise clearing during road works. However the success was variable.
- 8.9 Eddy Wajon strongly requested all members to submit Orchid Sighting Reports to record presence of orchids on roadside verges so that they can be entered into the Registrar's Data Base.

- 8.10 John Ewing reminded members about the desire of Diane Becker, a Lecturer at Challenger TAFE, Mandurah, to do an orchid survey on the campus.
- 8.11 John Ewing reported lots of instances of orchids being dug up along the South Coast and Mogumber Rd. Ryan Phillips said on Gull Rock Rd, Albany, that many *Thelymitra variegata* (Queen of Sheba), have been dug up.
- 8.12 Gary MacDonald reported that there are no orchids left along Stevenson Rd, Bindoon, because of pig disturbance in area.

## **9. GENERAL BUSINESS:**

- 9.1 Gary MacDonald has produced an orchid flowering register compiled in 4 different formats. Members can request a copy direct from John Ewing electronically.
- 9.2 Ryan Phillips advised that BGPA (Botanic Gardens and Parks Authority) is undertaking pollination studies on *Caladenia huegelii* (Grand Spider Orchid) and *Drakaea elastica* (Glossy-leafed Hammer Orchid). This will involve tagging orchids in the Perth region and the Southwest. Members are asked to leave the tags in place.
- 9.3 Eddy Wajon acknowledged the role of Bill Burton as WANOSCG Librarian over the past 15 years upon his retirement from the position. This was supported by the whole meeting by acclamation.
- 9.4 Eddy Wajon called for a volunteer to take over the role of Librarian.

## **10. PRESENTATION:**

Margaret Petridis gave an excellent presentation showing the orchids found at the Australian Wildlife Conservancy Mt Gibson Conservation Reserve two years ago. They increased the number of known orchids from 12 to 20.

## **11. RAFFLE DRAW:**

Won by: Alison Higgins.

Meeting Closed: 9:00 pm.

**NEXT MEETING: 7:30 pm Wednesday  
21<sup>st</sup> September 2011**

**Southern Rivers Group  
Field Trip Report  
6<sup>th</sup> August 2011  
Mandalay Beach  
and William Bay**

After a stormy wet week, twelve club members and two visitors arrived at the sunny but chilly ranger's garage. At the first stop along Mandalay Beach Road we made ourselves comfortable for Elizabeth Edmunds' ("Project Dieback" Officer with South Coast Natural Resources Management and club member) presentation on Dieback. Dieback posters were discussed whilst we discovered many uplands are protectable whilst lowlands have become infested due to previous land usage, movement of soils and soil particles and human movement across the landscape. Protectable uplands highlight the need to look after these areas and keep them dieback free.

Information packages were handed out with many heading back to Perth for members to read and use on future field trips. Just ask the trip participants at the next club meeting. Cleaning (using a horse hoof cleaning brush with a hook) and sterilisation (70% mentholated spirits) on foot wear, carry bags, walking poles, tripods and any gear that touches the ground as well as car tyres, which can be managed by all who venture out along established tracks in search of orchids.

Having eaten half our lunches the group walked along the many tracks. True to form, dozens of leaves were found compared to a few flowers of *Corybas recurvus* (Helmet), *Cyrtostylis huegelii* (Mosquito) and *Cy. robusta* (Large Gnat). Sorting out the *Pterostylis* aff. *nana* became a challenge, however, *P. aff. nana* (Limestone Snail), *Pt. aff. nana* (Slender Snail) and another *P. aff. nana* subsp. unknown were sighted. We found *Caladenia meridionalis* (South Coast Spider) in two distinct locations.

Under a prickly wattle on the edge of the deeply eroded track was a delightful colony of *Pt. rogersii* (Curled Tongue Snail) whilst out in the open the first *Pt. vittata* (Banded Greenhood) were found. A variety of six different leaves were sighted. Some from plants already gone to seed or never having flowered this season and others to look forward to, especially *Caladenia latifolia*.

Off William Bay Road the season is very poor due to dry conditions. The remaining flowers were already over their best. *Corybas recurvus*, *Cyrtostylis huegelii* and *Cy. robusta* were seen again. Very few *Pterostylis* aff. *sanguinea* (Coastal banded Greenhood) and *P. aff. sanguinea* (Crowded Greenhood) as well as *P. vittata* (Banded

Greenhood) were seen beside the road and tracks. Again a range of leaves will bring us back later in the season.

On our return to the cars another Perth club member whose name happens to be the same as the national park was found comfortably seated on the ground happily snapping photos in the warm afternoon sun.

The day was enjoyed by all, especially many Perth members, who were delighted with the sightings of 1-3 "new" orchids to add to their ever increasing list of sightings.

**Kalbarri - Stephen Buckle**

Last weekend I went up to Kalbarri for the night. Saw around 20 plus species all up but only got photos of around 19, there are only so many photo's I can take of Candy's and Snail's. Saw Curly Locks, Hoffman's Spider, Kalbarri Spider, Purple-veined Spider (from the salt lakes on the way up) and Smooth-billed Duck. Got photo's of a pure green duck with just the calli on the tip black that looks good. Also saw Dwarf Zebra, Frog Greenhood, Kneeling Hammer, lots of hybrid cowslip x pale pinks, lots. It was a good trip.

## Field trip

by Ross & Margaret Fox & Matz Dahlkamp.

We started for William Rd off Brookton Hwy and found *Pterostylis hamiltonii*, *P. aspera*, *Diuris porrifolia* & *Caladenia reptans* subsp. *reptans*. On to Narrogin & Foxes Lair, just a few *Caladenia xantha* and *Pterostylis concava*. Yilliminning Rock wasn't good or Lake Toolabin, just rosettes. Tarin Rock was also a disappointment, very little to see. The first night was at Lake Grace. At Pingrup there were hundreds of *Caladenia melanema*, Jerramungup was very little and also at the 6km site with only a few orchids to be seen or even leaves with buds. We knew when we set out that we were a few weeks to early for a lot of orchids species. We looked in vain for *Thelymitra speciosa* near Ongerup. Fitzgerald River NP was a disappointment, but when nearly back at the car we found several plants of *Caladenia vulgata*, *C. microchila*, *C. radialis* and *C. dimidia* as well as *Ericksonella saccharata* and *Pheladenia deformis*, as well as *Diuris*. The whole trip we found many forms of *Diuris* that we could not identify as the colours varied so greatly. Further along the Hwy we found 2 very small *Thelymitra speciosa* ms (Eastern Queen of Sheba) and we found over 50 *Caladenia arrecta*. At Ravensthorpe a few *Pterostylis allantoidea* and *P. microchila*, no evidence of *Calochilus* at Hopetoun, on John Forrest Rd were lots of *Caladenia graminifolia*, then on the Southern Ocean Rd we were told about *Corybas despectans* which we found. On Springdale Rd we found *Thelymitra spiralis*. At Munglinup Beach were plenty of *Corybas limpidus* but little else along the way. Most of the rain we had so far was at night, on arrival at Esperance it was blowing a Gale and at Wireless Hill we were almost blown off our feet so we gave up. There was very little at Helms Arboretum, so we decided to go to Mt Ridley to look for *Caladenia longicauda* subsp. *rigidula*, but had to go to Kau Rock Rd before we found some. Most of the various sites we stopped at we only found a few common orchids, but at Boyatup Hill we found only 1 *Cyanicula nikulinskyae* that we had been looking for. We spent 2 nights at Duke of Orleans C/P and could only find buds from *Caladenia longicauda insularis*. Hill 50 was very disappointing and very overgrown not much to find, mainly *Caladenia decora* and a few *C. longicauda crassa* and *Diuris*. On Sunday we set off for Styles Rock we did not find much on the way but at Scaddan I think I found *Diuris* subsp. *Scaddan*. At Styles Rock we only found about 20 *Caladenia sigmoidea* and about 6 other common orchids normally found there. On the way back we had more time to look around and at Doust we found 3 *Caladenia cruscula* in flower and at Truslove NR at 3 different stops found *Caladenia brevisura*, *Pterostylis* subsp. dwarf shell and a couple of other *Pterostylis*. On Monday we set off for the Lake King Norseman Rd via Cascades Rd all the time watching the weather, we got to the lake and found a few *Caladenia voigtii*, *C. pachychila*, *C. sigmoidea* and a hybrid with *C. microchila* and *Pterostylis mutica*. We had a quick lunch as it looked like rain so we quickly left and only got a few kms before it started, but it was not to bad. On past Lake King about 8km to Sugg Rock NR and found a few common orchids and several *Caladenia sigmoidea* and

Beautiful *Diuris parryi* at Frankland.

back to Lake King for more *C. sigmoidea*. Spent the night there and set off early for Varley Rock where we found lots of *Caladenia radialis*, *C. vulgata* and hybrids, *C. doutchiae*, *C. roei* and hybrids, *C. pachychila*, lots of *Ericksonella saccharata*, *Pterostylis mutica*, *Pheladenia deformis* and *Diuris* subsp. northern granite. Holts Rock wasn't much or Lilly McCarthy Rock as well. Went to Dragon Rocks for lunch, not a lot there either so carried on to Pingaring Golf Club. No sign of the *Caladenia graniticola* but did find an interesting *Caladenia radialis* X *roeii*. Back to Lake Grace for the night. Then at Jerramungup area we went back to the sites we had been to earlier on the trip and found many of the buds we have seen then were opening up, and saw *Caladenia pulchra*, *C. longicauda* subsp. *eminens*, *C. cairnsiana*, *C. flava reptans* subsp. *reptans*, *C. falcata*, *C. longicauda* subsp. *redacta*, *C. hirta* subsp. *rosea* as well as various hybrids. *Pterostylis recurva* were in abundance as well as *P. sanguinea* and *P. vittata* with the latter 2 starting to go to seed. Near Ongerup and the Stirlings we found a couple more of *Thelymitra speciosa*. At Cranbrook and Tenterden we only found mainly *Diuris* and a few scattered *Caladenia* leaves with buds. In Albany we went to Gull Rock area and found a *Thelymitra variegata* as well as *Corybas despectans* and *Pterostylis* subsp. short sepals. At Mt Barker some buds were just starting to flower and we found *Caladenia arrecta*, *C. vulgata*, *C. discoidea*, *C. polychroma*, *Pterostylis recurva*, *P. sanguinea* (seeding) and *Diuris longifolia*. At Frankland Jim Parry our local orchid member who keeps an eye on the orchids in the area, was kind enough to show us his newest find of *Diuris parryi*, that he found just a couple of years ago and is still waiting for it to be recognised. On the way home we found lots of *Caladenia polychroma*, *C. vulgata* and what appears to be subsp. Tenterden and also *C. caesarea* subsp. *caesarea* but only with a short labellum (possible hybrids). At Kojonup were lots of *Diuris* and we found a dark red *Caladenia pulchra*, Hurley Rd near Williams the *Caladenias* were just coming out, buds were everywhere, *C. magniclavata*, *C. reptans* subsp. *reptans* and *C. barbarossa* still in tight bud. We decided to detour through York for the last stage of the trip to see if there were any *Thelymitra spiralis* out at the Wambyn NR, which we found along with *Caladenia magniclavata* and *C. longicauda* subsp. *eminens* and *Pterostylis barbata*. A good trip overall with seeing most of the orchids we had set out to find.

## Ninghan Station

August 27<sup>th</sup> & 28<sup>th</sup>

The broad expanse of the Mid-West of WA is currently flooded with colour as swathes of pink, white and yellow everlastings and other little daisies abound almost everywhere you look. It was against this backdrop on a glorious Saturday morning that the group of 25 members gathered under an enormous Morton Bay Fig tree at Ninghan Station which is 50km south of Paynes Find.

David Lawson led the group to Warrdagga Hill, a trip of about 30km from the homestead. The climb up the moderate slope was rewarded with magnificent views over the countryside. Most members weren't pausing much to look, because it was not long before the first spider orchids were found and soon the discussions began about whether they were *Caladenia incensa* (Glistening Spider Orchid) or *C. remota* subspecies *remota* (Outback Spider Orchid). Those with good noses could smell the 'hot metal' odour and the leaf size generally made distinguishing the two species apart reasonably easy, but as always, some of the flowers had not read the book and didn't seem to conform.

David led the group down the stream that ran much of the length of the rock in a hollow between the higher points of the rock. Here, trees provided sheltered spots and to the delight of the children the stream had many tadpoles in it. A wide range of orchids were discovered, and of the 19 species plus 3 hybrids found, some of the highlights were *C. douthiae* (Purple-veined Spider Orchid), *C. incrassata* (Puppet Orchid), *C. pachychila* (Dwarf Zebra Orchid) *C. mesocera* (Narrow-lipped Dragon Orchid) and *Microtis eremaea* (Slender Mignonette Orchid). At places down the rock there were patches with hundreds of *Thelymitra antennifera* (Vanilla Sun Orchid) and at other places *T. petrophila* (Granite Sun Orchid). The most exciting finds were the hybrids of *C. incensa* with *C.*

*incrassata*, (a flower with pink tinges on the petals and sepals) together with *C. pachychila* and *C. remota* subsp. *remota*.

Sleeping orchids?

After lunch, the group set off to find a site where Trevor Cunningham had earlier found a Rufous Greenhood in flower. The magnificent *Pterostylis spathulata* (Spoon-lipped Rufous Greenhood) was located in full flower. In the same vicinity were huge numbers of other orchids that had been seen earlier on Warrdagga Rock. Also there was *Diuris* subsp. 'northern granite' (Rosy-cheeked Donkey Orchid).

A final stop at a rocky breakaway yielded more of the species seen earlier. The day ended with a sense of having witnessed more of nature's spectacular wonderland.

Sunday saw the group leave Ninghan and proceed south to a parking stop where more of the same species were found. One highlight was a hybrid spider of unknown name (and unfortunately rather damaged condition). The final official stop of the trip was at another David Lawson special spot which was another huge rock located north of Dalwallinu. Around the base of the rock were myriads of both *T. antennifera* and *T. petrophila* (previously called *T. aff. macrophylla*). The main attraction was a hybrid between these two species which is known as the Crimson Sun Orchid. The range of colours varied from a light salmon pink to a rich dark crimson. They were not common despite the thousands of *T. antennifera* and the hundreds of *T. petrophila*, but the more we looked the more we found. There were also many more of the species previously seen. This rounded off an exciting and interesting trip.

By John Ewing

Thank you to Lyle & Janice Metcalf, Jay Steer and George Kokosinski for their photo contributions.

	<b>Raffle Roster</b>	<b>SPEAKERS 2011</b>
<b>MAR</b>	John Hills	Mark Brundrett – Final Report on Wheatbelt Orchid Rescue Project that has been funded by a Lotterywest grant
